

# *Time to Spin*

**E**quinox will never leave you in the dark! It has hands of darkness some times, and hands of light at others. A young industrial designer, Bram Knaapen created Equinox Clock, which is equipped with 60 RGB Leds, making any colour palette possible. In this version of the software, the colour palette cycles through the colour of the rainbow twice a day. There is a light sensor to make sure that the intensity is tuned down in the dark. The clock will illuminate the way you view your hours, minutes and seconds, as the designer presents hours as three coloured blocks, minutes as a single coloured block, and seconds as a fading row of blocks, all of them sliding round and round the Equinox circle.
